PROFESSIONAL SUMMARY

Business and Systems Analyst with experience in software implementation, requirements analysis, business process improvement, and enterprise application support. Experienced in translating business and user requirements into functional specifications, process and data flows, data mapping, system configuration, and UAT. Skilled in coordinating implementation activities, validating system and data accuracy, troubleshooting functional issues, and working closely with business users, technical teams, QA, and other stakeholders throughout the implementation process.

WORK EXPERIENCE

PT Jasamedika Saranatama – Bandung, West Java | May 2023 – Present
Implementation Specialist

- Requirement Analysis & Solution Design: Collaborate with business stakeholders, product owners, and end-users to gather, analyze, and document business requirements.
- Functional Configuration: Collaborated closely with technical and development teams to define functional requirements, prepare functional specifications, and validate system customizations, including new fields, menus, workflows, and system enhancements based on business requirements.
- Customization & Development: Work closely with technical teams to specify and validate the development of customizations, including new fields, versions, menus, and system enhancements based on business requirements.
- Testing & Quality Assurance: Lead and participate in system testing cycles-including Unit Testing, SIT (System Integration Testing), and UAT (User Acceptance Testing)-to ensure solutions are fit for purpose.
- Implementation & Support: Support the end-to-end implementation lifecycle, including data migration, go-live, and post-production support. Troubleshoot and resolve functional issues.
- Training & Documentation: Create detailed functional specification documents, configuration guides, and user manuals. Conduct training sessions for end-users and key stakeholders.

PT Javas Karya Tripta – Bogor, West Java | November 2021 – December 2022
